

# A Well-known Governmental Entity Replaces Its Legacy Infrastructure with Kalaam Cloud Solutions

Location: Kuwait | Industry: Government | Cluster: Cloud

## Upgrading Network Infrastructure in terms of Connectivity, Security, and Cloud.

The Organization was going through a transformational phase as it encountered numerous problems linked to network performance, mainly caused by the utilization of outdated network equipment. Multiple data loss incidents occurred because of a lack of security measures, coupled with the use of aging physical servers and storage infrastructure.

## Modernized the infrastructure and improved network performance through the replacement of outdated equipment and the introduction of Cloud and Security solutions.

Kalaam designed and delivered a tailor-made solution that solves customer challenges through the below key deliverables:

- Enhancements were made to connectivity and its related hardware.
- Services such as Virtual Private Servers (VPS), Backup Storage as a Service, and Disaster Recovery (DR) were implemented.
- The network and cloud infrastructure were safeguarded using cutting-edge technologies.
- Advanced voice solutions were implemented.

**“We required solutions that offered greater flexibility compared to our previous traditional network configuration. The advantages of this transformation went beyond cost reduction; we also observed improved productivity among our staff.”**

Customer Testimonial
