

Kalaam Establishes a Secure and Resilient Network Infrastructure for a Well-known Logistics Company

Location: Kuwait | Industry: Logistics | Cluster: CyberSecurity

Migrate the existing network to a more secured and stable network infrastructure.

One of the company's significant challenges was the absence of stable internet connectivity, particularly Fiber connectivity at its operational locations.

Additionally, the company needed an independent, trustworthy, and protected network infrastructure to ensure the seamless operation of its activities, while ensuring security for the data through their network.

Kalaam proposed Fiber Connectivity along with Firewall solution as part of CyberSecurity services.

Kalam provided an interim Microwave solution to enable smooth transition of network services to Fiber.

Finally, Kalaam team successfully delivered fiber cables at three different operational sites and provided a managed Firewall solution to apply the appropriate security measures improving network's security posture.

“Kalaam's approach was totally professional. They understood our business requirements and the security landscape. The blend of fiber and security solutions played a vital role in establishing a dynamic and secured network that facilitates our operations.”

Customer Testimonial

Overview

A global transport and logistics company that provides international transportation services by road, air, sea, and rail, with its headquarters located in Hedeheusene, Denmark. The company has a workforce of over 75,000 professionals across more than 80 countries worldwide. The company needed a network infrastructure to support its operations inside Kuwait while improving the security posture of their network.
