Kalaam Connects One of the Largest Stock Exchanges in Europe over SLA-Backed Layer 3 GMPLS Networks

Location: Kuwait | **Industry:** Banking & Finance | **Cluster:** Connectivity

Having a reliable and secure Global MPLS network connecting between GCC and Europe sites

The company required a resilient GMPLS network to link its offices in the GCC with its Data Center (DC) in London. This network required a strong solution with SLA-Backed connectivity in numerous countries across the GCC and Europe, coupled with a strong technical team to meet the expectations of both the company and its end-user clients.

Kalaam GMPLS network connects the stock exchange DC in UK across EMEA

In accordance with the customer's requirements, our team of experts successfully implemented a L3 GMPLS network for the company. This network serves to connect the stock exchange data center with its offices in the GCC, spanning across Europe and the EMEA region. Kalaam was able to provide guaranteed SLA for connectivity which ensured that the customers data traverses through the most optimized and fastest connectivity path.

"We were looking for a strong SLA-backed GMPLS connectivity from our UK DC to EMEA offices Kalaam has demonstrated deep technical understanding and flexibility to meet our expectations. And we are happy with the services provided over a robust infrastructure."

Customer Testimonial

Overview

A multinational corporation headquartered in the United Kingdom. The company is part of one of the largest stock exchanges in Europe offering information services across a range of industries including finance, legal, tax, accounting, healthcare, science, and media. With an extensive operational reach, the company maintains a significant presence more than 60 countries spanning the Middle East, North America, Latin America, and the Asia Pacific region. A company of this nature requires reliable and robust secured global connectivity to keep their financial network up and running.
