

Digitizing a Bahraini Real-estate Firm's Network with Kalaam's Tailormade ICT Solutions

Location: Bahrain | Industry: Real Estate | Cluster: Connectivity, Managed Networks, and Voice

Legacy infrastructure stifled Connectivity and Voice in residential buildings and groups branch offices

The Group possessed an outdated network infrastructure where outlets did not have network connectivity to the main HQ offices, resulting in a lack of network visibility and insights. Additionally, the group operated on an old telephony system which resulted poor voice quality. The group company was in need for network refresh and services upgrade for their residential buildings and offices along with the need to monitor all outlets from the HQ. The group also wanted to ensure that they have sufficient phone extensions for the ease of communication between offices.

Kalaam experts studied the existing setup and proposed a turnkey solution to revamp the infrastructure

Based on the company's situation, Kalaam team delivered a tailor-made solution which covered the below key elements

- Secure SD-WAN with ADSL connectivity.
- Single platform for network visibility.
- Enabled network security with defined policies.
- Network migration from legacy copper to optical Fiber Connectivity.
- Upgraded network CPEs which have WiFi, SDWAN, 4G capabilities.
- Replacing the existing telephony system with the latest IP telephony solution.

This solution enabled the group to guarantee the availability of high-quality voice services and seamless, high-speed internet for both offices and residential buildings.

"The absence of centralized network connectivity between our headquarters and branch outlets left us without visibility and insights into our network. Kalaam experts crafted a customized solution that exceeded our expectations, leading to a successful network migration and infrastructure revamp. This initiative allowed us to upgrade our network in accordance with industry best practices."

Customer Testimonial
